

State Pseudorabies Advisory Committee (166D.3.2). Iowa received USDA Pseudorabies Stage V Status July 6, 2004. The state of Iowa was the last state to receive Stage V status and this is considered pseudorabies free status. USDA has ongoing surveillance testing done at slaughter. With pseudorabies being eradicated from the Iowa swine herd there has not been a Pseudorabies Advisory Committee for at least four years since I have been State Veterinarian.
